GOODSPEED ENVIRONMENTAL SERVICES

Goodspeed Environmental Services CC is a Durban based company who has effectively maintained client sales, service and marketing contact in the country and into Africa for the past 18 years. Since the beginning of 2005, we have offered countrywide sales, support and technical back up for all of our product ranges.

Val Goodspeed has been actively involved in the development of GES and has travelled internationally to distributor conferences and training courses of world leading Environmental Monitoring Manufactures for the different products that GES distributes into Africa.

GES's abilities are to offer turnkey equipment relating to water, soil and gas applications. We have the capability to sell, manufacture, test and commission for most environmental applications specialising in groundwater, soil and gas sampling or monitoring and remediation projects.

The company specializes in two areas namely:

1. Sales and
2. Equipment Rental.

We pride ourselves in been able to source and supply top quality, affordable products that meet our clients' requirements both technically and commercially as per their specific application.
