

## Who

Director: Peter Rosewarne  
Pr.Sci.Nat. MSc (hydrogeology) BSc (geology)

I have 44 years of experience in, e.g. groundwater resource evaluation and development, mine groundwater management, subsurface contamination, landfills, specialist reports for EIAs and licensing reports for nuclear sites.

Proven track record of reviewing, editing and producing high quality reports for clients such as the Department of Water Affairs, Eskom, Shell, Chevron, Anglo American, Gold 1, Tasman Pacific Minerals and ENSafrica

## Why?

The quality of a report reflects the quality of the organisation producing it or for whom it is produced. During the course of reviewing hundreds of technical reports on the above subjects, it was clear that most could have been improved by being subjected to review by a suitably experienced independent peer reviewer. GPRS can enhance groundwater reports for consultancies before submission to clients or review reports for organisations to ensure that your clients are delivering quality products.

## Benefits

**1: Costs:** Obtain the services of a highly experienced principal level hydrogeologist as and when needed, at a very competitive cost.

**2: No competition:** Groundwater Peer Review Services only does peer reviews, by appointment only, and does not tender for groundwater projects.

**3: Confidentiality:** Sole proprietor. Your report/document review will never be used to market GPRS experience or be divulged to a third party. You can use a GPRS review to address your organisation's quality control protocol and acknowledge the review or choose not to indicate that any such review has been carried out.

I look forward to the possibility of adding value to your projects.

A handwritten signature in black ink, appearing to read 'Peter Rosewarne', is written over a light blue circular stamp.
